

Rogers Vs. Steamer St. Charles

Rogers Vs. Steamer St. Charles

SooperKanoon Citation : sooperkanoon.com/80657

Court : US Supreme Court

Decided On : 1856

Appeal No. : 60 U.S. 108

Appellant : Rogers

Respondent : Steamer St. Charles

Judgement :

Rogers v. Steamer St. Charles - 60 U.S. 108 (1856)

U.S. Supreme Court Rogers v. Steamer St. Charles, 60 U.S. 19 How. 108 108 (1856)

Rogers v. Steamer St. Charles

60 U.S. (19 How.) 108

APPEAL FROM THE CIRCUIT COURT OF THE UNITED

STATES FOR THE EASTERN DISTRICT OF LOUISIANA

SYLLABUS

Where a steamer ran down and sunk a schooner which was at anchor in a dark and rainy night, the schooner was to blame for having no light, which, at the time

of collision, had been temporarily removed for the purpose of being cleansed.

But inasmuch as the schooner was in a place much frequented as a harbor in stormy weather, and of which the steamer was chargeable with knowledge, it was the duty of the steamer to slacken her speed on such a night, if not to have avoided the place altogether, which could easily have been done.

The fact that the steamer carried the U.S. mail is no excuse for her proceeding at such a rapid rate.

The case must therefore be remanded to the circuit court to apportion the loss.

Where the decree was for a less sum than two thousand dollars, the appeal must be dismissed for want of jurisdiction.

This was a case of collision under the circumstances stated in the opinion of the Court.

Page 60 U. S. 109

MR. JUSTICE NELSON delivered the opinion of the Court.

The libel was filed in the district court to recover the value of a quantity of merchandise on board the schooner *Ella*, which was sunk in a collision with the steamer on Lake Borgne, some six or eight miles east of the lightship in Pass Mary Ann, while at anchor on the night of the 5th February, 1853. The district court rendered a decree charging the steamer with the loss.

On an appeal, the circuit court reversed the decree and dismissed the libel on the ground that the schooner was in fault in not having a light in the fore-rigging or in any other conspicuous place on the vessel to give notice of her position to the approaching steamer.

The night was dark and rainy, and the wind blowing fresh from north-northwest. A proper light had been hung in the fore-rigging early in the evening, and kept there till near the

time of the collision, which happened about half-past eleven o'clock. One of the hands had taken the lamp down to wipe off the water that had collected upon the glass globe, so that it might shine brighter. While he was standing midships, wiping the lamp, he heard the approach of the steamer, and immediately placed it on the top of the cook house. The collision soon after occurred. The fault lies in removing the lamp for a moment from the fore-rigging to midships. If it was not practicable to wipe it in the rigging, another light should have been placed there on its removal. The time of the removal may be, as happened in this case, the instant when the presence of the light was most needed to give warning to the vessel approaching. All the hands examined who were on board the steamer deny that they saw any light at the time on the schooner.

We agree, therefore, with the court below, that the schooner was in fault.

But it is insisted on the part of the appellants that the steamer was also in fault on account of her rate of speed at the time, regard being had to the darkness of the night and the character of the channel she was navigating. The schooner, on coming out of the Pass Mary Ann towards evening met a strong headwind and swell of the lake, and after pursuing her course some four or five miles, anchored under Cat Island. There were several other vessels at anchor at the time in that vicinity.

Some of the witnesses state that the place is used as a harbor for schooners and other vessels navigating the lake in rough weather, as it is somewhat sheltered from the winds, and the number of vessels at anchor in the neighborhood at the time of the collision would seem to confirm this statement, and there is no evidence in the case to the contrary.

There is conflicting evidence on a point made by the appellant that the steamer was out of the direct and usual course of steamers from Pass Mary Ann to Mobile. The weight of it is that this course was a mile and a half or two miles north of the place where the schooner lay. But we do not attach much influence to this fact, as

in the open lake there was no very fixed track of these vessels within the limit mentioned.

There is also some little discrepancy of the witnesses as to the darkness of the night. But the clear weight of it is that at the time of the collision, it was very dark and rainy, and the wind blowing fresh.

The witnesses on the part of the steamer are very explicit on this part of the case. The pilot says the night was very dark and drizzling rain. The captain that the night was

Page 60 U. S. 111

dark and cloudy, and the wind blowing briskly. The engineer that the night was so dark a vessel of the size of the schooner could not be seen at all till upon her, without a light, and yet he says there was nothing in the weather to prevent her running at her usual speed.

The steamer was going, at the time of the collision, at the rate of from nine to ten miles an hour. The pilot says at her usual rate of speed, or at the rate of eight or nine knots. The engineer, not exceeding the usual rate of speed, which, it appears, averages about ten miles. The mate states that the speed at the time was between ten and eleven miles.

Now considering the darkness of the night and state of the weather, and that the steamer was navigating a channel where she was accustomed to meet sailing vessels engaged in the coasting trade between Mobile and New Orleans and the intermediate ports, we cannot resist the conclusion that the rate of speed above stated was too great for prudent and safe navigation, and this whether we regard the security of the passengers on board of her or the reasonable protection of other vessels navigating the same channel, and especially under the circumstances of this case, in which she was bound to know that the place where this schooner lay was a place to which vessels in rough and unpropitious weather, navigating this channel, were accustomed to resort for safety. The case presented is much stronger against the steamer than that of casually meeting the schooner in

the open waters of the lake. She was at anchor with other vessels in an accustomed place of security and protection against adverse winds and weather, familiar to all persons engaged in navigating these waters. The place and weather therefore should have admonished the steamer to extreme care and caution, and it is perhaps not too much to say, should have led to the adoption of a course that would have avoided the locality altogether. The weight of the evidence is, even if she had pursued the most direct course from Pass Mary Ann to Mobile, it would have had this effect -- she would have passed north of this cluster of vessels anchored under the shelter of the island.

Neither is it at all improbable, if the speed of the steamer had been slackened and she had been moving at a reduced rate with the care and caution required by the state of the weather, that she would have seen the light on the schooner in time to have avoided her. The proof is full that there was a light on board from the time she cast anchor till the happening of the disaster. But at the critical moment it was in the hand of the seaman at midships instead of at a conspicuous place in the rigging. The light must have been in some degree

Page 60 U. S. 112

visible, as all the sails of the vessel were furled and was placed on the top of the cook house as soon as the wet and moisture were wiped from the glass.

The admiralty in England has repeatedly condemned vessels holding a rate of speed in a dark night under circumstances like the present, and so did this Court in the case of [*The Steamer New Jersey*](#), 10 How. 568; *The Rose*, 2 Wm.Rob. 1; *The Virgil*, *ib.*, 201.

It has been urged, on behalf of the steamer that she carried the mail, and that a given rate of speed was necessary in order to fulfill her contract with the government.

This defense has been urged in similar and analogous cases in England, but has been disregarded, and indeed must be unless we regard the interest and convenience of the arrival of an early mail more important than the reasonable

protection of the lives and property of our citizens.

Having arrived at the conclusion that the steamer was in fault, the case is one for the apportionment of the loss.

The decree must therefore be reversed, and the case remitted to the court below, for the purpose of carrying this apportionment into effect.
